

ABSTRACT OF THE DISCLOSURE

A method for monitoring the position of a mobile communication terminal for location dependent telecommunication services and an active voice connection, wherein to guarantee that the telecommunication service works correctly during a call, the position of the terminal in question needs to be checked not only when the connection is set up but also for the entire time of the connection, such that if a change of position is established, the telecommunication service then needs to be changed in a corresponding manner by the service center.
